Shane Smith

30 Day Challenge

1. This project I was most proud of. To me it was also the most fun. It also took the longest because I was chasing perfection too much. It's a bad habit I need to break. I learned SO much on my journey. I was not sure about Houdini the first few times I used it. Then after one of your classes it just kinda clicked. I feel like I had to rewire my brain from using Maya so often. I learned so many tools. How to scatter points, L-systems, how to merge and copy to points. So much stuff. I find myself looking in video games now and wondering if they used a lot of similar systems. I loved it. I think it shows compared to my characters. The passion is here. I was able to build a whole forest scene and do things without looking it up by the end. It was great. And I had PLENTY of crashes so speed was key. Once I learned a way it wasn't so bad if it crashed b/c I could just go back and create it again better. I look forward to using Houdini more and more!
